

IDM Mining Inc. – PEA & Evaluation of Underground Conditions

Red Mountain Project, Stewart, British Columbia, Canada

JDS Energy & Mining Inc.

JDS completed the Preliminary Economic Assessment of the Red Mountain Project for IDM Mining Inc. which provided the client with preliminary engineering and development plans as well as and economic information that provided an initial view of project viability and a guide for advancement of the project. Consistent with the JDS formula for value addition, the work performed identified the most practical and profitable direction for project development without tying resources on technically impractical development scenarios. JDS managed all aspect of the study.

JDS is also currently working on providing support for IDM's UG diamond drilling program. The work includes establishing ventilation, power, services and dewatering for the existing mine's development to support drilling activities. JDS will also provide ground support as needed and will manage the mine during the drilling program.

Project Value: \$500K
